What's New in PHPMaker 2017

PHPMaker 2017 is a major upgrade from 12.x. It is loaded with a bunch of new features, including many frequently requested ones. PHPMaker is probably the most powerful and flexible product of its kind, and yet still easy-to-use as always.

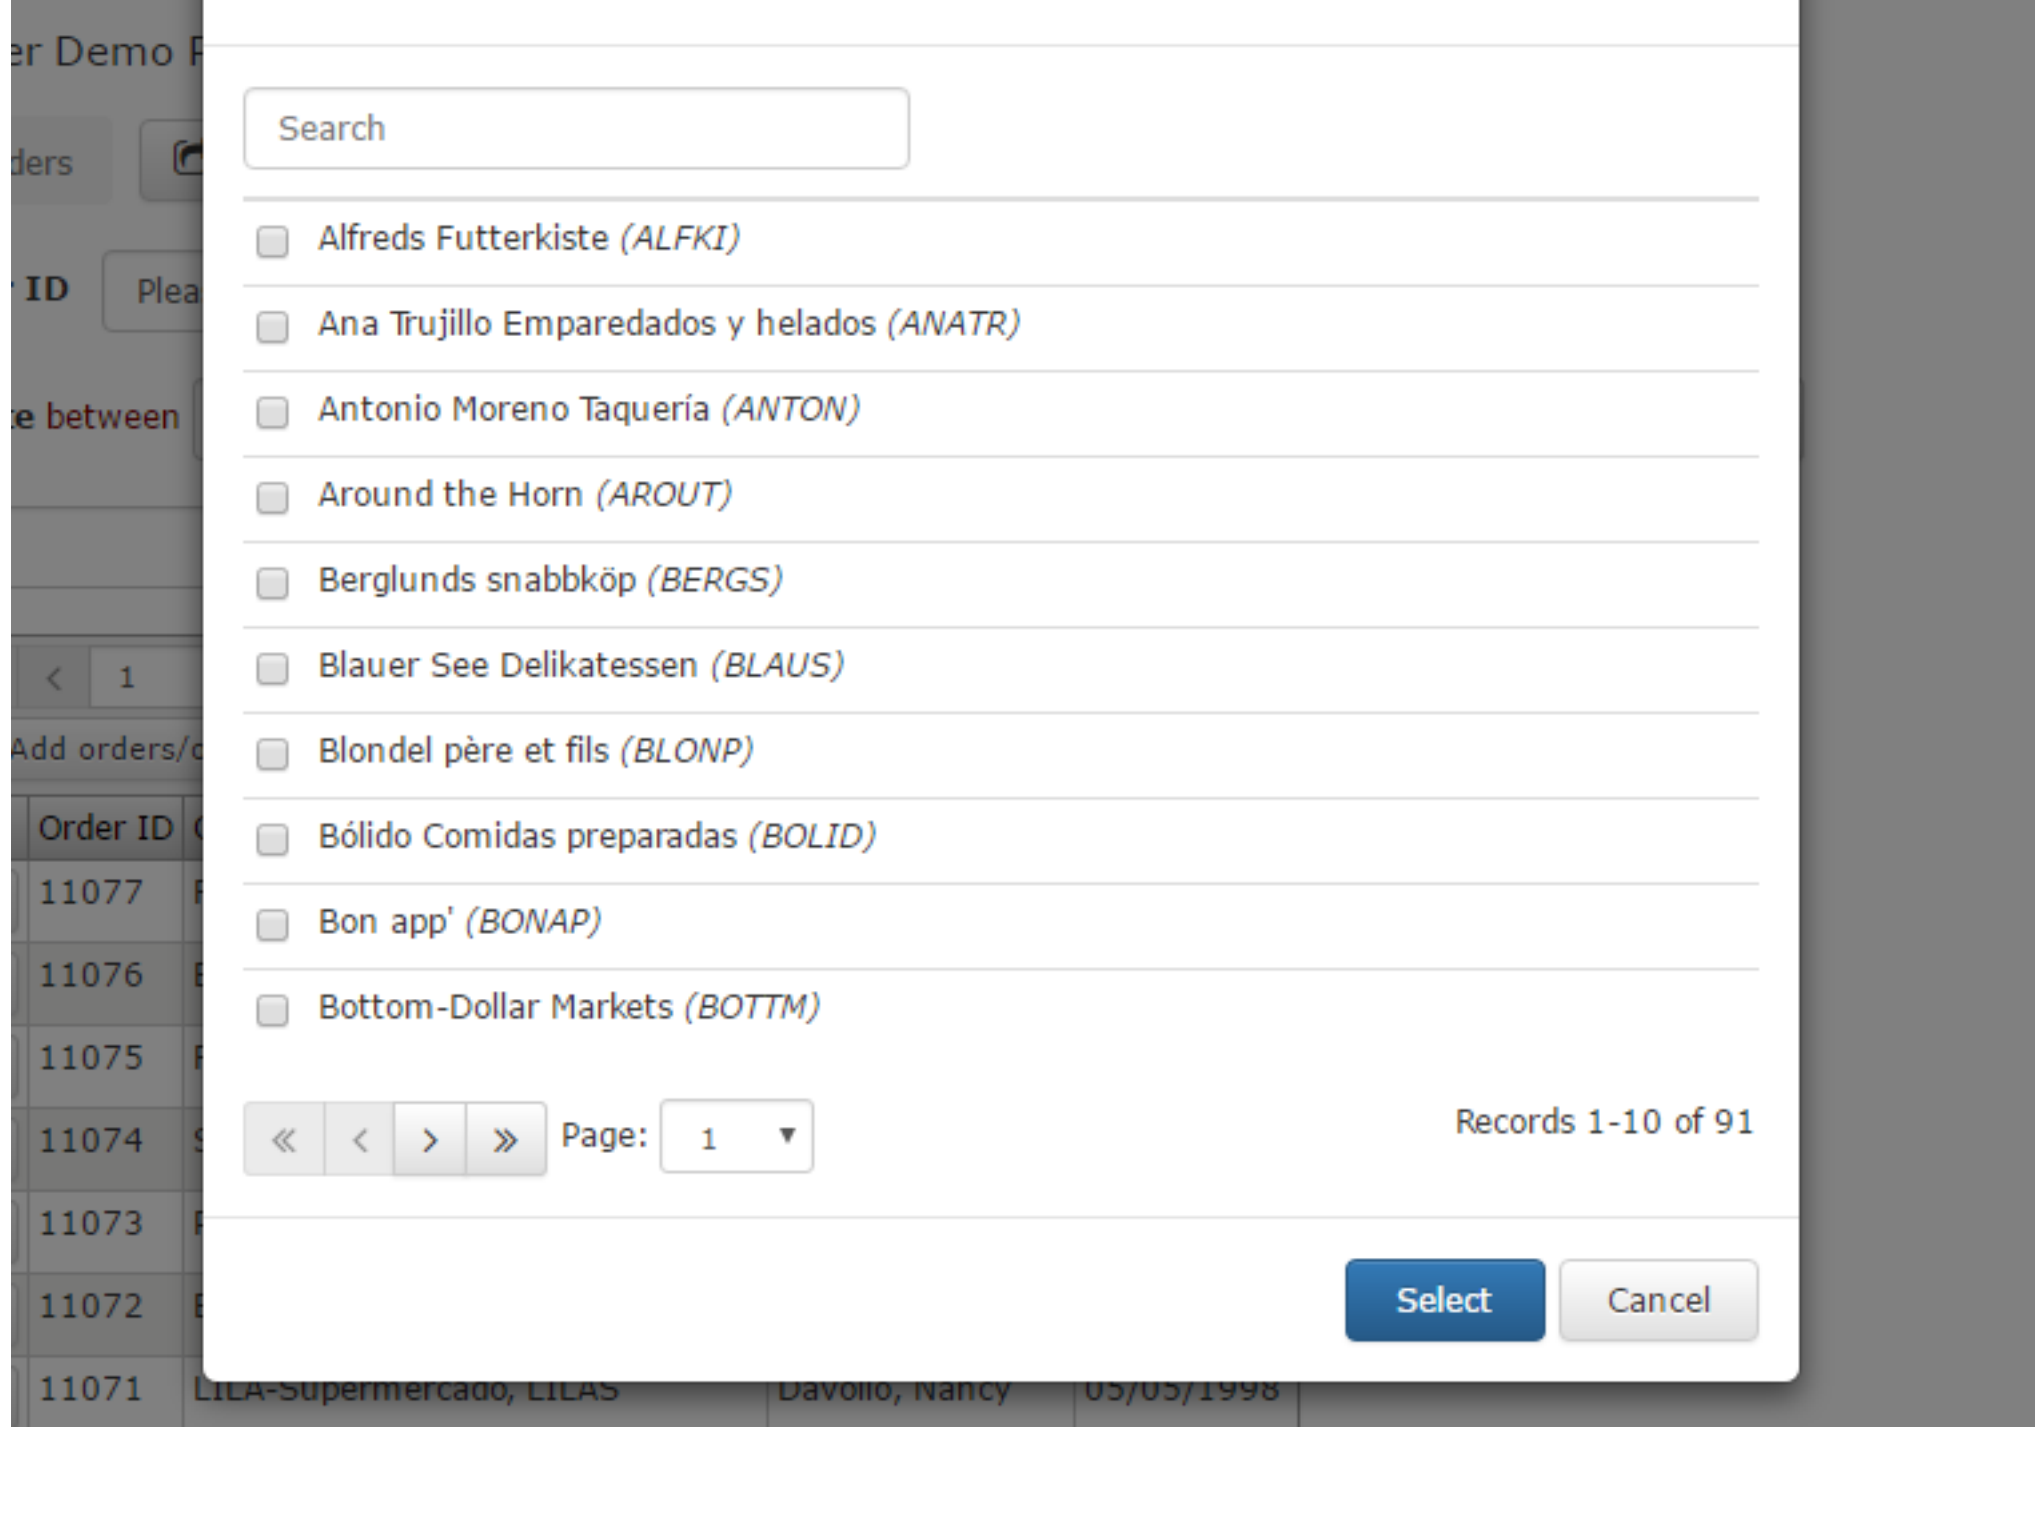

Modal View/Edit/Update/Add/Copy in List Page

In addition to modal Search and Delete (Inline Delete), now you have options to use modal dialog for View/Edit/Update/Add/Copy page in List page also.

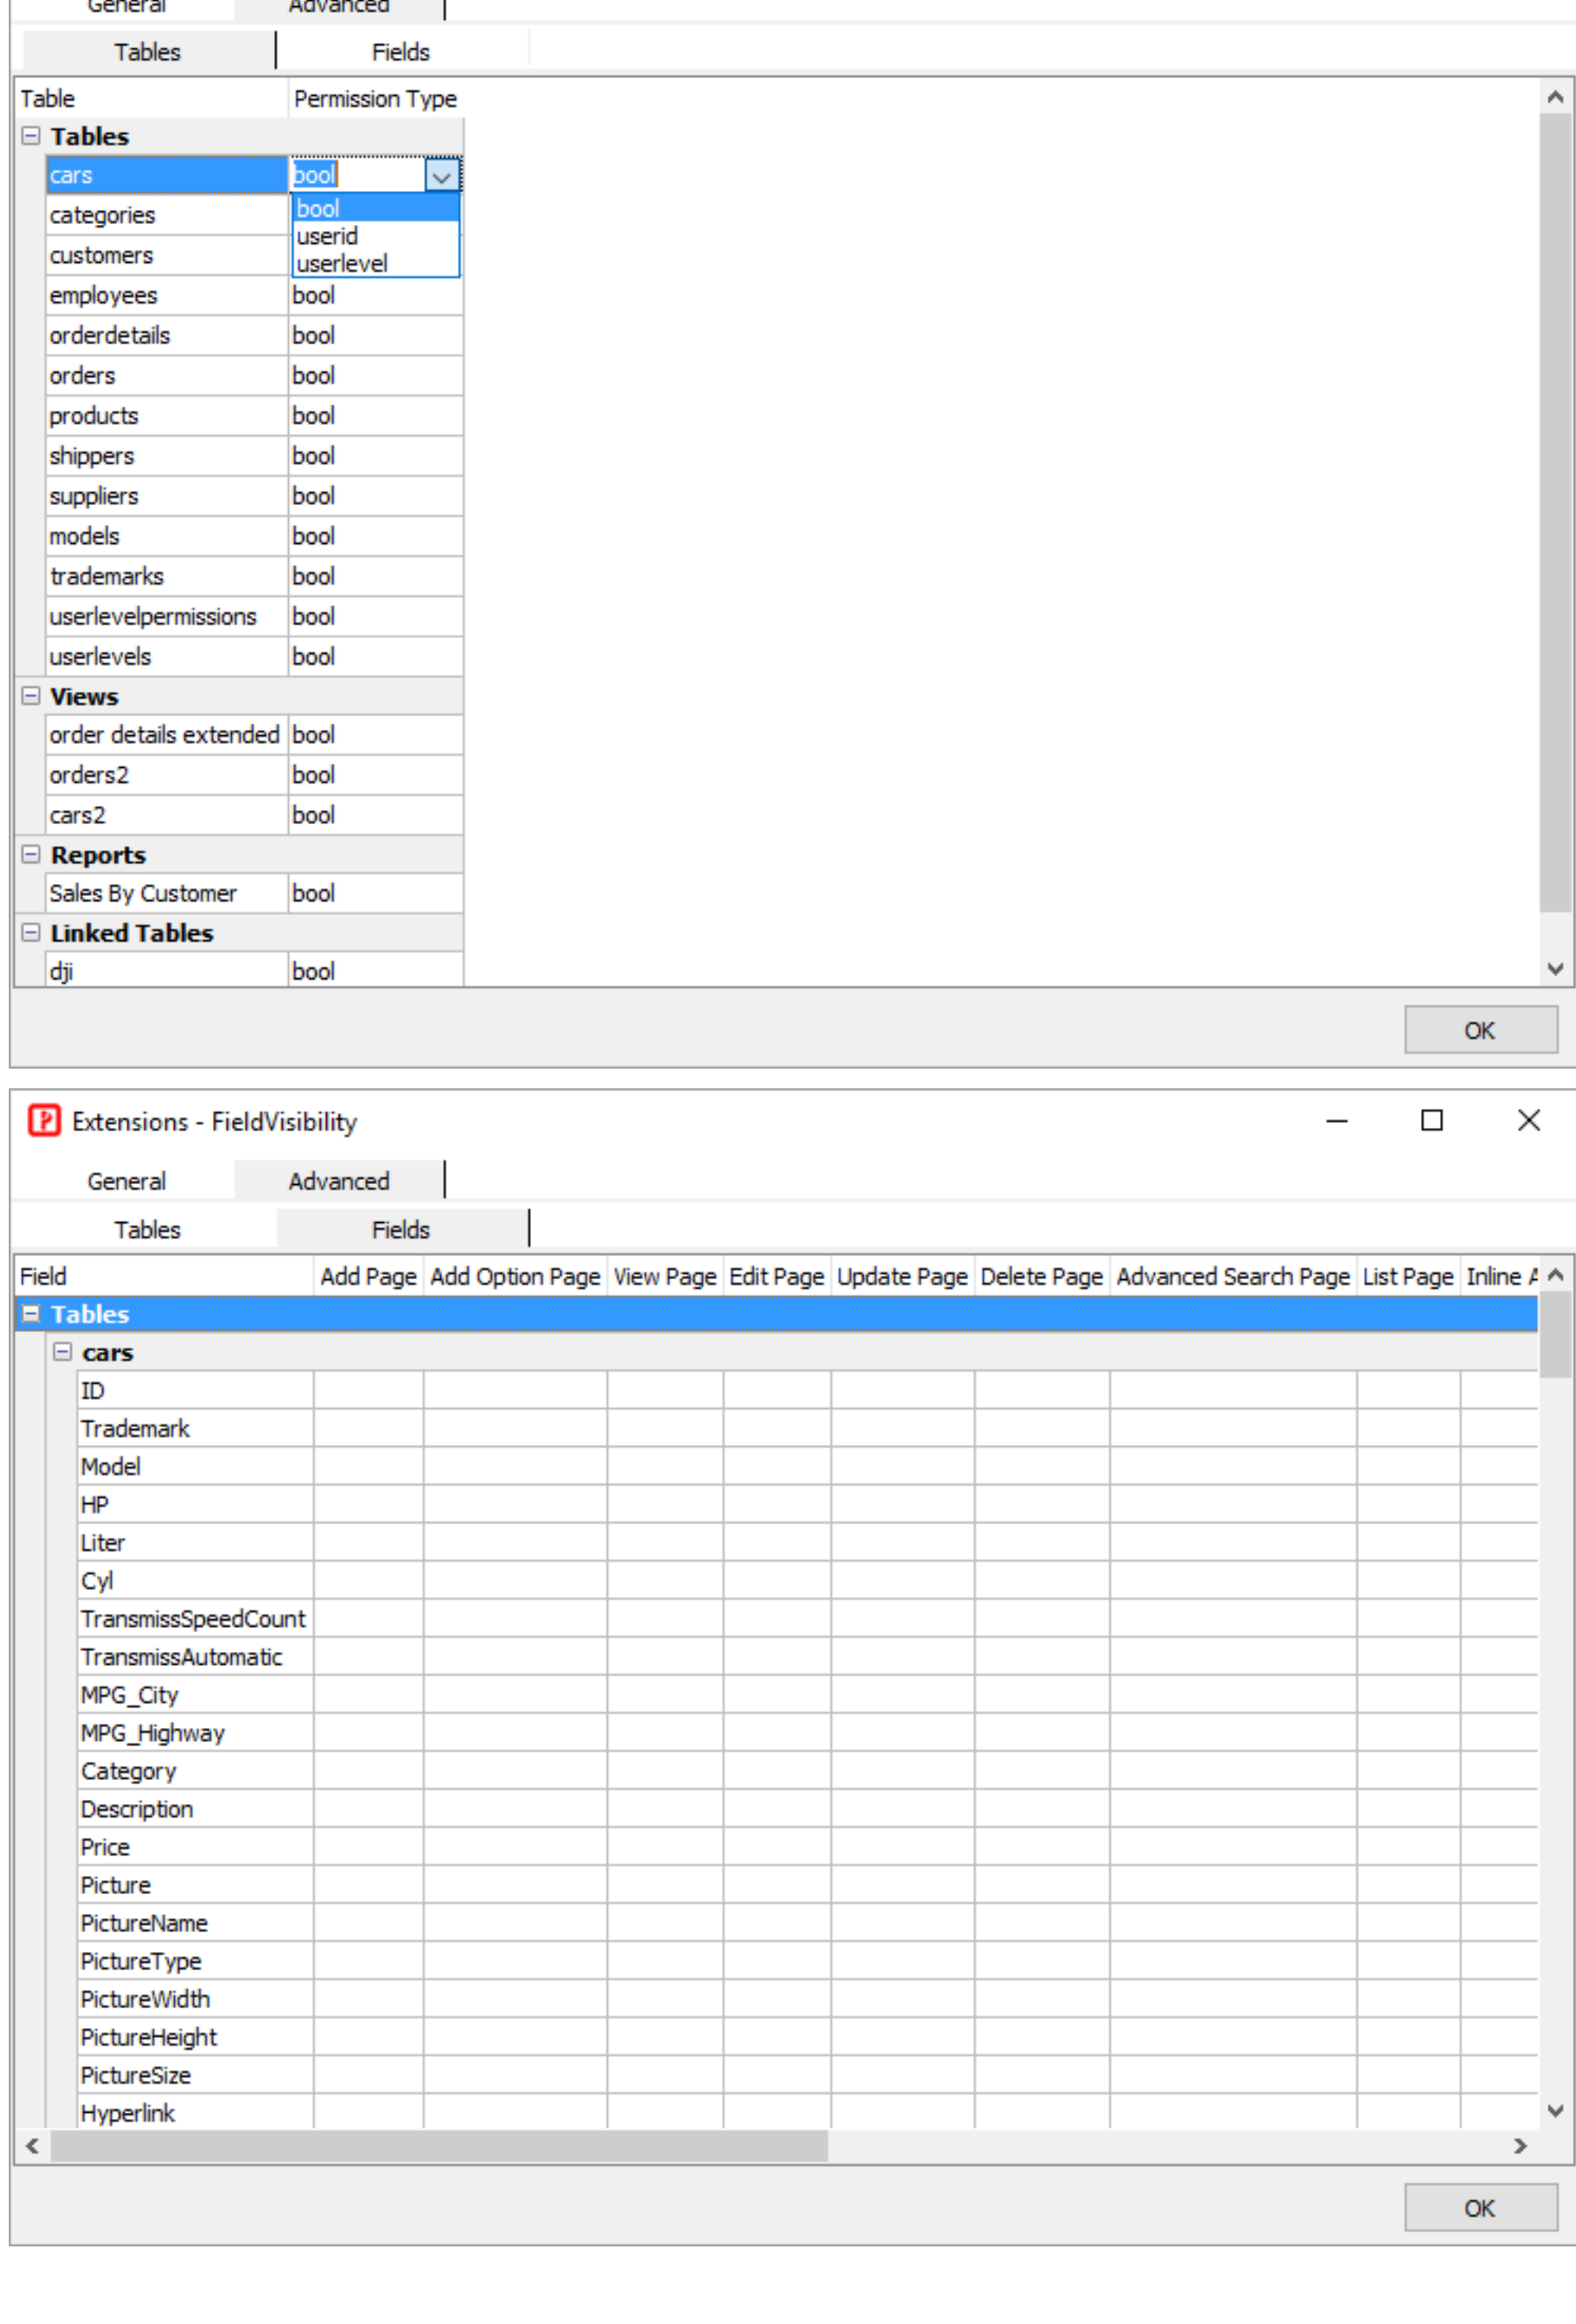

Modal Lookup Dialog for Searching and Selecting from Lookup Table

Option to replace TEXT/RADIO/CHECKBOX/SELECT Edit Tag with a modal lookup which supports searching, paging and option template.

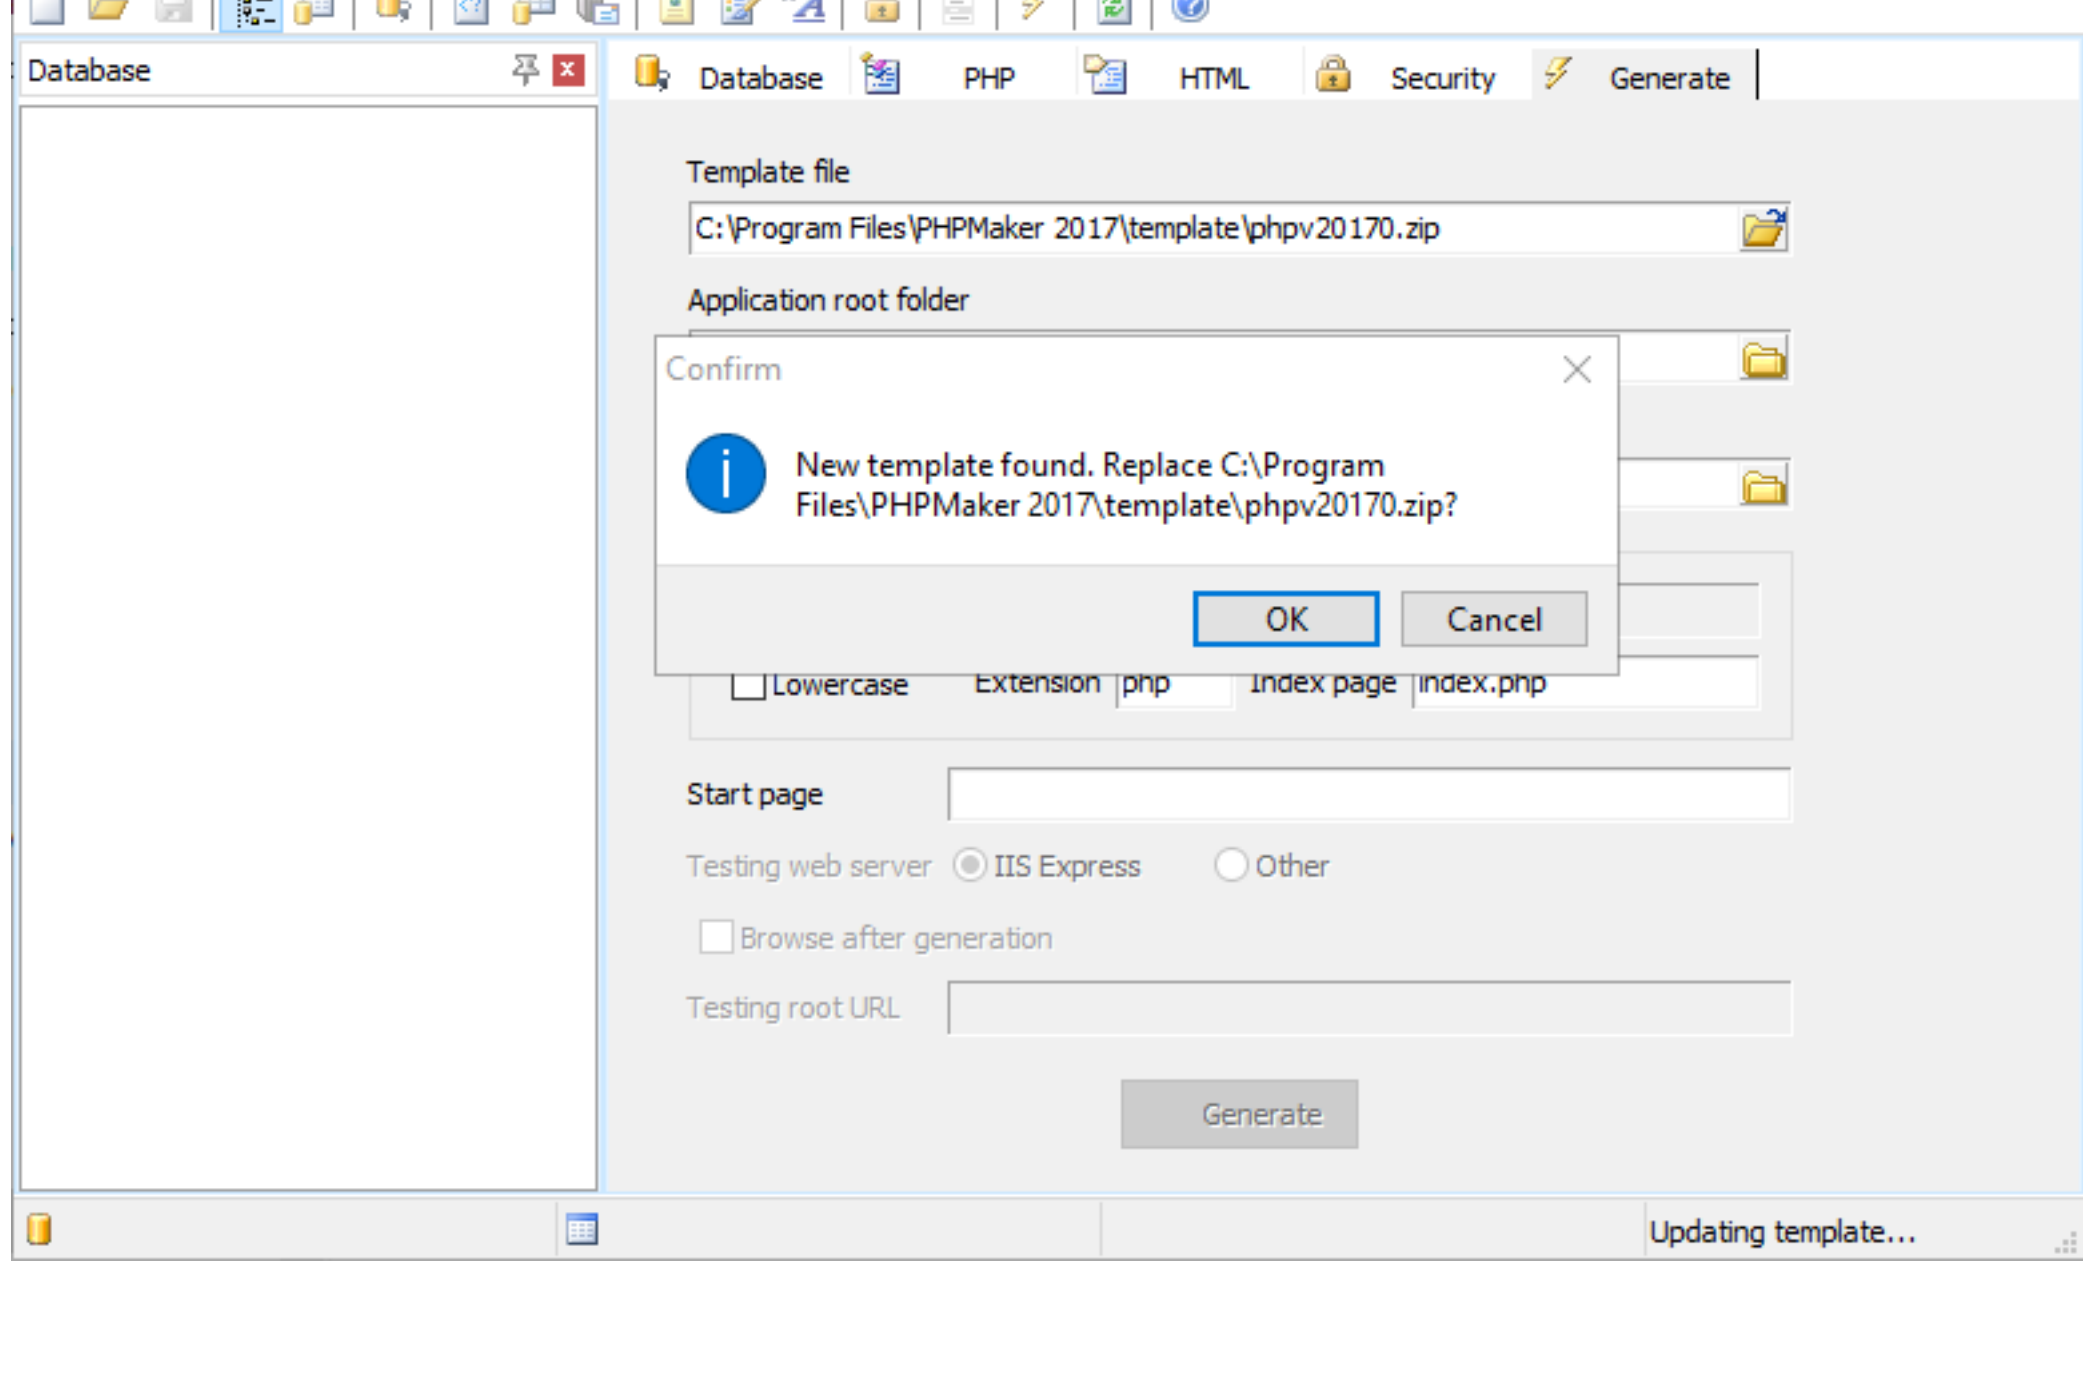

Field Visibility Extension (for registered users only)

Easily set Visible property of field object for different pages or actions. Supports permissions by boolean expression, User ID, User Level or combination of them.

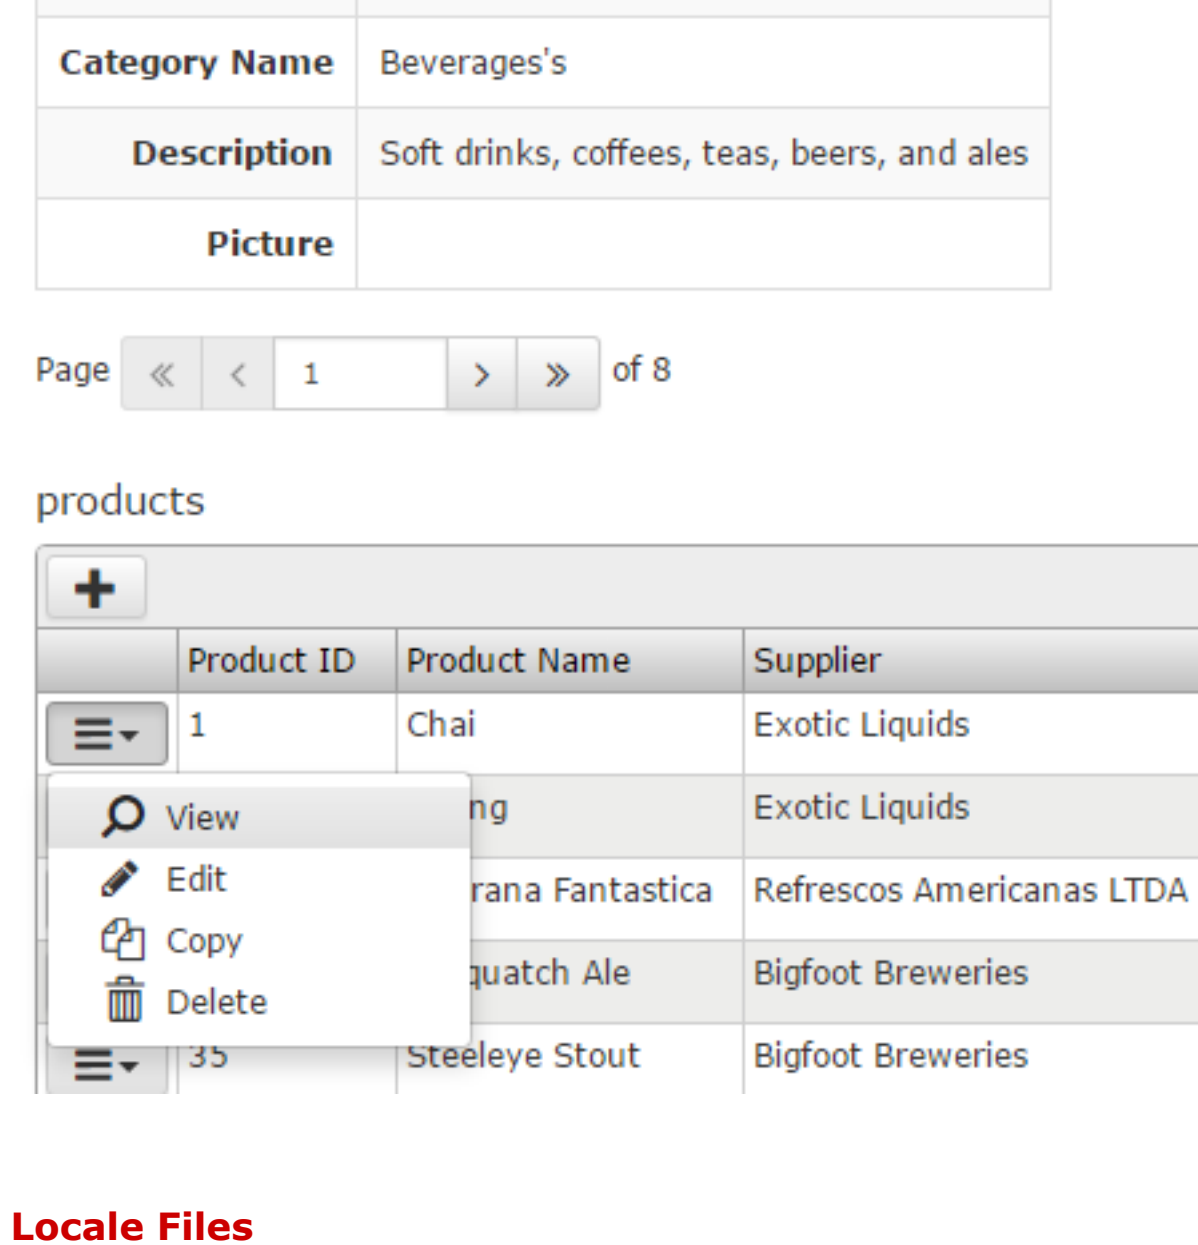

Auto Update to Latest Template (for registered users only)

Check and download latest template automatically.

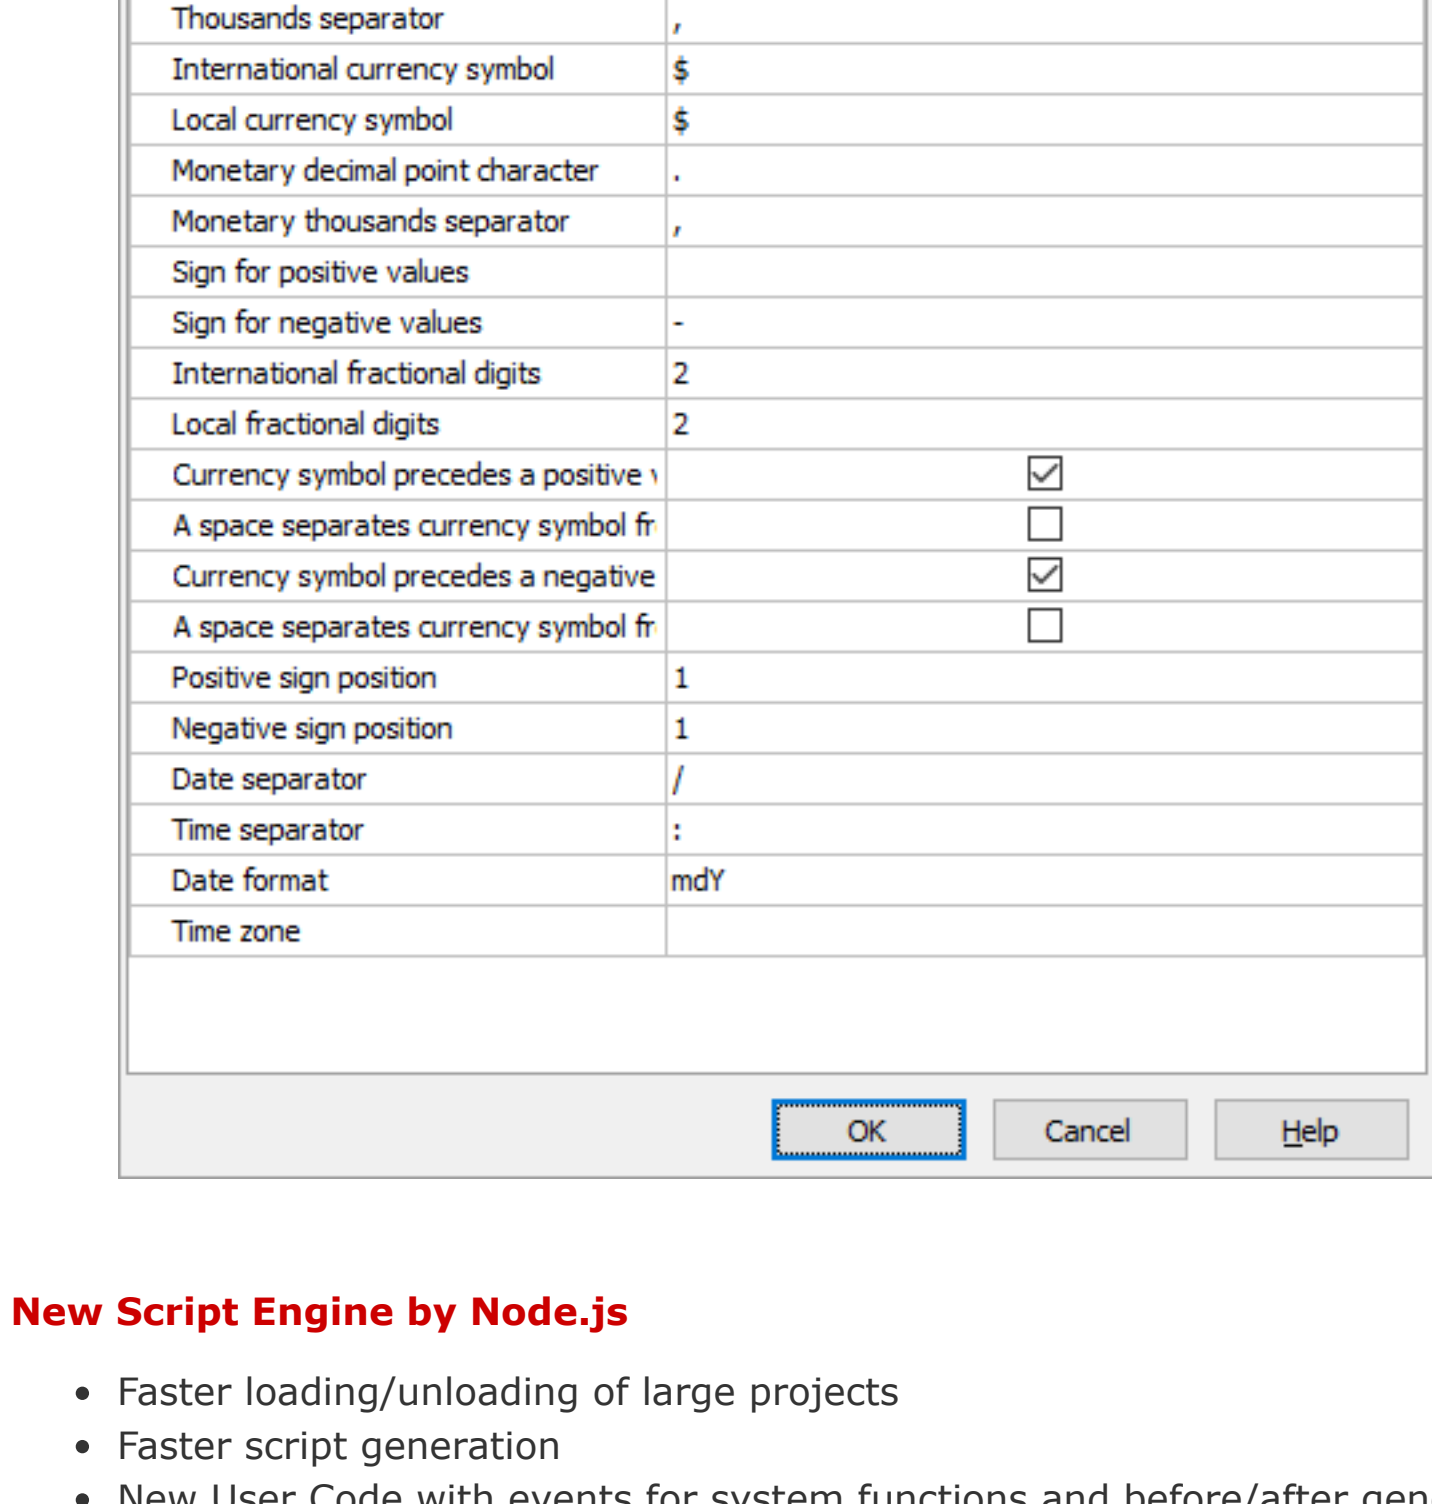

View/Edit/Add/Copy/Delete links in detail table of Master/Detail View

Now the detail grid in Master/Detail View includes links for Add, Copy, Edit, Delete, and View.

Locale Files

- Locale files for 70 languages
- Locale settings with date and time separators, date format and time zone by language
- Locale file editor

New Script Engine by Node.js

- Faster loading/unloading of large projects
- Faster script generation
- New User Code with events for system functions and before/after generation

More Advanced Settings

- **Search filter save option** - Option to save search filter on server side in database or on client side by localStorage
- **Hide separator section if single page** - Option to hide pager if single page only
