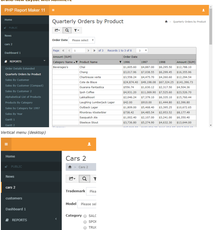
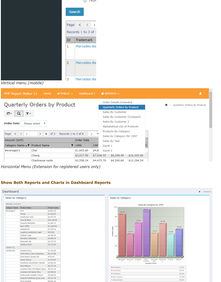
PHP Report Maker

What's New in PHP Report Maker 11

Brand-New Layout with AdminLTE



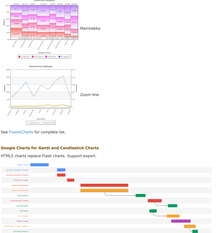
Vertical menu (desktop)



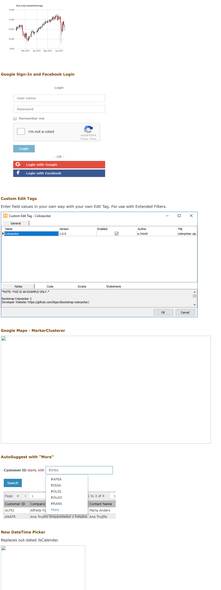
Vertical menu (mobile)

Horizontal Menu (Extension for registered users only)

Show Both Reports and Charts in Dashboard Reports



New Chart Types - Pareto 2D/3D, Marimekko, Zoom-line, 2D/3D Single Y Combination (Column + Line + Area)

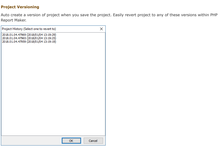


See FusionCharts for complete list.

Google Charts for Gantt and Candlestick Charts

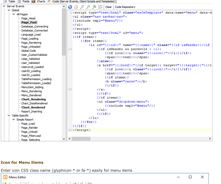
HTML5 charts replace Flash charts. Support export.

Google Sign-In and Facebook Login

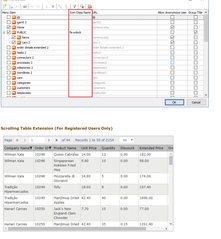


Custom Edit Tags

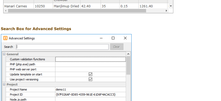
Enter field values in your own way with your own Edit Tag. For use with Extended Filters.



Google Maps - MarkerCluster



AutoSuggest with "More"



New DateTime Picker

Replaces out-dated bootstrap-datepicker.

Project Versioning

Auto create a version of project when you save the project. Easily revert project to any of these versions within PHP Report Maker.

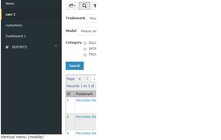
Auto-Render Template

Customize menu, language selector, navbar menu items... anywhere in the layout with your own Jsrender templates.

Icon for Menu Items

Enter icon CSS class name (glyphicon-* or fa-*) easily for menu items

Scrolling Table Extension (For Registered Users Only)



Search Box for Advanced Settings

New Advanced Settings

- PHP (client side) page and web server port
- Route (a related setting)
- Use project versioning
- Compress project .js - now minify all uncompressed .js in the project
- Use jQuery Migrate
- Use password hash - use PHP password hashing functions (instead of md5)
- Chart column CSS class (Left or Right) - specify the column CSS class for charts with position either on the left or right
- Chart column CSS class (Left and Right) - specify the column CSS class for charts with position either on both left and right
- LDAP options - for ldap_set_option()
- Google Sign-In settings
- Facebook Login settings

New Server Events

- Page_Post - for Auto-Render Templates
- Ldap_Validate0 - for searching LDAP tree and further validating LDAP users
- Menu_Rendered - for cleaning up what created in Menu_Rendering

More

- Allow using server event to set options for dropdown instead of getting distinct values
- F9 and Ctrl+F9 shortcuts for generating
- Support Google Chrome headless for update
- PHP built-in web server as testing server
- Option to minify all uncompressed .js in the project
- Option to use PHP password hashing functions
- Option to create new PHP Report Maker project from PHPMaker project
- jQuery file download
- Font Awesome
- Use Microsoft PHP Driver for SQL Server (EXPERIMENTAL only)
- Use PDO for Microsoft Access, Firebird, Informix, Ingres, MySQL, PostgreSQL updated
- Many other minor improvements
